## Monthly Air Pollution Control Program Summary Report Concerns Received or Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegation as it was made. Those statements of allegations do not necessarily reflect the legal

### Concerns Received During Report Period

	Total
Total	88
Asbestos	4
Fugitive Particulate Matter	7
Hazardous Air Pollutant Release	3
Odor	28
Open Burning	31
Other	10
Particulates	5

### Concerns Investigated During Report Period

	Total
Total	73
Concerns Received Before Report Period	11
Concerns Received During Report Period	62

Number of Notices of Violation Issued: 0

Number of Referral Notices of Violation Issued: 1

Number of Letters of Warning Issued: 0

Please note, the information provided in this report reflects all concerns investigated during the reporting period, regardless of the date on which the original concern was received.

## Monthly Air Pollution Control Program Detail Report Concerns Received or Investigated Between March 16, 2023 and April 15, 2023

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	3/22/2023	3/15/2023	David Montineer and his son Jake	Bates City Lafayette	Open Burning	CK		

## Monthly Air Pollution Control Program Detail Report

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p><b>Concern No.</b> 52859    <b>Concern Info</b> The concerned party stated that David Montineer and his son Jake are burning some type of material late at night every couple of days. This material is putting off a strong chemical smell that burns their eyes and noses.</p> <p><b>Comments</b> The responsible party claimed to only burn household waste. Compliance assistance was provided to ensure he knew what could not be burned under Missouri regulation.</p>								
KCRO	3/16/2023	3/16/2023	John "Jack" Alexander	Kansas City Jackson	Open Burning	MC		
<p><b>Concern No.</b> 52865    <b>Concern Info</b> Anonymous caller reports an open burning concern at 5103 Lee's Summit Road. The property straddles Kansas City and Independence, but it sounds like the burning occurs primarily on the Kansas City side.</p> <p>John "Jack" Alexander or his associates are burning on a weekly basis (sometimes twice per week). Burning typically occurs after midnight and has been ongoing for over a year; this morning the concerned party smelled the burning between 12:30 a.m. and 2 a.m. The burning smell was described as caustic, chemical, and plastic smelling.</p> <p>There is a small house at the west side of the property (off Lee's Summit Road); this is not Jack's house but rather a house he rents out. Jack's house is the two story almost barn-looking house east of the smaller house. The two-story house is actually in Independence. The concerned party says the burning occurs between the two houses, which would be in Kansas City.</p> <p>The concerned party advises caution; several people have been observed on property open carrying, Jack runs "Mad Jacks Guns and Ammo" out of the property (<a href="https://www.facebook.com/people/Mad-Jacks-Guns-and-Ammo/100051778281990/">https://www.facebook.com/people/Mad-Jacks-Guns-and-Ammo/100051778281990/</a>), and they suspect drug activity on the property as well.</p> <p><b>Comments</b> Referred to delegated local agency, Kansas City Health Department's Air Quality Program??.</p>

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52873	Concern Info	Experienced Odor Date and Time: May 15, 2020 5:00 pm					
			Experienced Odor Duration: Any time the outside temperature is above 30 degrees F.					
			Experienced Odor Description: Sewer					
			Experienced Odor Intensity: Strong or Offensive					
			Experienced Odor Address and/or Location Description: 4759 NW 64th Ter; Kansas City, MO 64151. Along 64th St. and Camden					
			Potential Source: City sewer line runs underground behind home.					
			Additional Information: I have been reporting this issue to our city water department through 311 going on for a couple of years now. They only send a team to flush the line but the odor returns within a day. Since the city completed a replacement of an old iron pipe in 2022 the smell has only increased in strength and frequency. The last time I reported this I informed the city I would be contacting the EPA to investigate. The city still refuses to provide any information on the status of the issue and converts my support tickets to resolved without any resolution or explanation. I have become increasingly concerned of this issue now having two young children and having them exposed every time we want to enjoy our backyard. The odor was strong enough to warrant Spire employees to knock on my door and inform me of the odor and assure me it was not a natural gas leak.					
Comments	This concern is located within the city limits of Kansas City; therefore, the concern was referred to the delegated local agency, which is the City of Kansas City Health Department's Air Quality Program.

## Monthly Air Pollution Control Program Detail Report

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53008 <b>Concern Info</b> The City of Raytown received a complaint about the air quality around the Heartland Cremation and Burial Society. I am submitting this complaint on their behalf. The residents claim that ashes and odor are coming down on the neighborhood, from this facility, especially at early morning hours. The ashes are falling in their yards and the odor is waking them up at night.								
<b>Comments</b> During the investigation, I observed the incinerator in operation and reviewed maintenance and monitoring procedures with the owner. The incinerator appeared to be operating properly; no visible emissions or odors were observed.								
KCRO	4/5/2023	4/5/2023	Unknown	Kansas City Clay	Permitting Odor	JS		
<b>Concern No.</b> 53015 <b>Concern Info</b> Caller believes neighbor has built a high tech incinerator or blast furnace in his backyard and is melting down circuit boards to recover gold. He said the back yard is full of junk. The incinerator is powered by big propane tanks, and you can hear a "roar" when they are running. The neighbor is running it from 11pm to 7am every night, and the odors are very bad. Caller is also concerned about the release of toxic gases from this operation. He does not know the name of the individual doing this. You can call the caller back for more details/information.								
<b>Comments</b> This concern is located within the city limits of Kansas City, MO; therefore it was referred to the Kansas City Air Quality Program.								
KCRO	4/13/2023	4/7/2023	Kastens	Rushville Buchanan	Open Burning	CK		
<b>Concern No.</b> 53114 <b>Concern Info</b> Date of Incident or Date First Noticed: 04/01/2023Please describe your concern, including the location on the property: Open burning of toxic materials.								
<b>Comments</b> I was not able to observe any burning during the investigation. Information was provided to the owner and occupant. The occupant stated he understood the regulations and would remain in compliance with them.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegation as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	4/10/2023	4/10/2023	Seal Master	Kansas City Jackson	Particulates Odor	MC		
<b>Concern No.</b> 53077 <b>Concern Info</b> Over the past 3 years, Seal Master has been using the building adjacent to my home to mix asphalt. The fumes given off by the process are pungent, noxious, and unpleasant. A white cloud emanates from the building during the process and a terrible odor accompanies it. We are concerned that the emissions are hazardous to our health, and to the health of the neighborhood								
<b>Comments</b> This concern is located within the city limits of Kansas City, MO; therefore, the concern was referred to the delegated local agency, which is the City of Kansas City Health Department's Air Quality Program.								
KCRO	4/13/2023	4/13/2023	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH		
<b>Concern No.</b> 53121 <b>Concern Info</b> From Email - Tried leaving the garage door up a little bit today. Had to shut it because of the smell smelling up our house. This is pathetic and is the fault of the MO DNR								
<b>Comments</b> Odor was present but the odor was less than 2:1 D/T on the Nasal Ranger.								
KCRO	4/14/2023	4/13/2023	Ideker Mosby Asphalt Plant	Mosby Clay	Particulates	JS		
<b>Concern No.</b> 53123 <b>Concern Info</b> From MEERTS - caller states the SRP is burying an unknown material at the incident location that is putting toxic smoke in the air. The individual said the smoke is white in color and had to drive through it on Highway 69. The reporting party states that this has been reported a few times before.								
<b>Comments</b> A Letter of Warning has been issued to Ideker's Mosby Asphalt plant for particulate emissions beyond the boundary of the facility property.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53122	<b>Concern Info</b> On 04-13-2023 at approximately 1735 hours, I Officer Allison made contact with the landowner of 705 ADA Street because of the illegal burning of tires that has been causing heavy black smoke smelling like burning rubber though out town. The fire has been burning for 5 days since 04-08-2023. The landowner James Langley stated that it was his son Ryan Langley who set the fire. James said that the fire caught a couple of tires on fire. I asked James if he would put out the fire. James stated that it was his son's deal and that he would tell him to put it out when he gets up in the morning.  I took a few photographs of the smoke coming from the pile and placed the photographs with the report.  <b>Comments</b> ?The responsible party was burning brush and was unaware of the tires underneath the visible vegetation. The tires were burned unintentionally, so compliance assistance was provided. The responsible party agreed to ask the fire department to help extinguish the tires and will implement new procedures to help prevent a recurrence.							
NERO	3/23/2023	3/15/2023	Austin Lomas	Williamsburg Callaway	Open Dumps Open Burning	JB		
<b>Concern No.</b> 52887	<b>Concern Info</b> Caller reports that residents (Lomas family) are living on a property owned by Betty Flowers have been burning tires and bringing in trash from offsite and dumping it on the property.  *The Callaway County Assessors GIS, shows that the property deed was transferred to Justin Gentry on 12/29/22. His address is listed as 8872 County Road 433, New Bloomfield.  Previous investigations were conducted on this property in 2019 ACE38553, 2020 ACE41596, and 2021 ACE47531.  <b>Comments</b> Violations of the Missouri Solid Waste Management Law, as well as the Air Conservation Commission Regulations were observed. Dumping and burn of regulated solid waste.

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 52925 <b>Concern Info</b> EPA Region VII referred a report regarding a neighbor burning wood smoke at 16 E. Thurman St., Columbia, MO. It is reported that the smoke is getting into their houses and causing lots of health and breathing problems. This is the only neighbor on the street that burns wood (and whatever else). It smells horrible. Disappointed that Columbia allows this. It should be illegal and criminal. At 12:30 a.m., I can smell the smoke inside my house. Went outside and it is heavily polluted. How are we supposed to live like this and within city limits. It's ridiculous. Ignorant policies and malicious neighbors.								
<b>Comments</b> No violation is being alleged. Smoke from wood furnaces is not regulated by the Department. No further action.								
NERO	4/4/2023	4/4/2023	Paul Laws	Moberly Randolph	Odor	SB		
<b>Concern No.</b> 52973 <b>Concern Info</b> We live near an indoor cow farm and we are unable to go outside due to the amount of house flies. We believe this can be health concern and seems to be preventable on their end.								
<b>Comments</b> The Department has no authority to address the situation alleged by the concerned parties. No investigation will be conducted.								
NERO	4/6/2023	4/4/2023	Fred Atkinson	Kingdom City Callaway	Open Burning	DB		
<b>Concern No.</b> 53247 <b>Concern Info</b> Caller reports burning tires in brush piles 100 acres, 6 burn piles, 6-10 tires per pile with additional tires on site.								
<b>Comments</b> Violation of the open burning rule. An Unsatisfactory Finding report will be issued.

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 52801 <b>Concern Info</b> Anonymous caller reported a large pile (~15ft high, 25 ft wide) of apparent demolition waste is staged behind a mobile home and a smaller pile is located in front of a residential property. It was referenced that the waste is in connection with a demolition of a motel located on Highway 53 owned by Victor Bagwell (See Concern #4174, related to asbestos). Several large truck loads of waste were brought and dumped on property west of 322 CR 4072, Poplar Bluff. Worley tree services vehicles were utilized for transfer of waste.								
<b>Comments</b> On 3/16/2023 Jesse Evens and I investigated a tip submitted to the department regarding demolition waste being deposited on a site which the waste did not originate from. This waste is believed to be connected to the building demolition located on highway 53 south of Poplar Bluff. We made a site visit, but were unable to access the property, photos were not taken due to the distance and obstructions between the road and the piles. I spoke with Alan Worley via phone and he stated the material was moved before DNR made our initial contact. Alan Worley stated that the group would be back in the county on Monday March 20, 2023 and he would contact the Department at that time.?								
This investigation will be taken into account when finalizing concern document #4172

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p><b>Comments</b> I arrived at the location around 1:15 p.m. on March 22, 2023. I took photos of houses on both sides of East Lee. The house included in this concern located at 106 E Lee Street is being renovated due to damages from a storm earlier in the year. I viewed the property the best I could from the road side, because there was no one on site to provide access to the property. I spoke with a neighbor whose name was not disclosed. After I provided my credentials and explained why I was on site. The neighbor explained to me that the house that collapsed caught fire at some point last summer. The house that had caught fire and collapsed at 109 E Lee Street is not under the same ownership as the house being renovated that is located across the road. According to the neighbor, the house involved in the concern, which is 106 E Lee Street, has recently been worked on by the homeowner when the weather is favorable. I thanked him and left the property.</p> <p>I continued to the Hayti City hall to attempt to make contact with Frank Rose, who is the Code Enforcement Officer in Hayti. Frank Rose confirmed there was some confusion on shingle disposal in Hayti. Frank Rose informed the owner of the property that they would have to dispose of the shingles, not the City of Hayti. Frank Rose also confirmed there has been no burning at the property in question. The lack of burning at this property excludes the owners of any violations of Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.045 Open Burning Requirements. I also spoke with Karla Laws who is the City Clerk.</p> <p>There is no need for further investigation because there was no evidence of open burning taking place on the property noted at time of the investigation. Moreover, this project at 106 East Lee Street is the renovation of a single family residence, which is excluded from the definition of facility under Title 40 Code of Federal Regulations Part 61 Subpart M---National Emission Standard for Asbestos. Fact Sheets provided to City Hall personnel are listed below.</p> <p>Asbestos Requirements for Demolition and Renovation Projects - PUB2157</p> <p>Asbestos: Inspection Report Requirements - PUB2349</p> <p>How to Handle Asbestos Containing Debris - PUB2121</p> <p>Illegal Disposal of Construction and Demolition Wastes - PUB2251</p> <p>Managing Construction and Demolition Waste - PUB2045?</p> <p>No violations of state and federal air regulations were observed.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Comments	<p>have inspected this facility as part of my duties as an air pollution control inspector. There is a paint trap/waterfall system used at TG Missouri. These units are located as part of the paint booths at TG Missouri. I would describe each of these as a water curtain at the back of each paint booth that captures paint overspray. It is a closed loop system located inside the buildings at TG Missouri. It is technically known as a water wash filtration system. Water is used as the filter media. TG Missouri also uses some dry filters for its painting. There is not an outdoor air drying process involved as described in this environmental concern. TG Missouri employs piping with a collection tank to hold the process water from the water wash filtration system along with the paint sludge. Paint-based waste material captured by the water curtain is ultimately removed from TG Missouri for disposal. It is not placed outside to air dry, however.</p> <p>I began this investigation at approximately 11:25 a.m. and I left the area at approximately 1:06 p.m. The weather at 11:16 a.m. was sunny with a reported temperature of 52 degrees Fahrenheit. The wind was from the West at 4 miles per hour with gusts of up to 17 miles per hour. The humidity relative to the temperature was 53%. During this investigation I conducted odor surveillance in Perryville. Because I was not locating an odor from TG Missouri, I travelled to various locations to check for odors and then I drove around TG Missouri's property.</p> <p>I drove from Highway 51 to Highway 61 (11:25 a.m.). I continued driving on highway 51 on to State Route AC (11:26). Then I drove from State Route AC to State Route V (11:29) to PCR 900 and back on to Highway 61 (11:31). I drove Highway 61 and then turned on to Walters Lane (11:33). I drove along Walters Lane slowly and then turned on to Corporation Lane (11:35). I stayed on Corporation Lane (from 11:36 to 12:00). I drove along Corporation Lane to Walters Lane and on to Highway 61 (12:00 to 12:03). I drove along Highway 61 to the Dollar General Store near the intersection of Highway 61 and Highway 51 and pulled in to the parking lot to park (from 12:04 to 12:37 p.m.). I pulled back on to Highway 61 and drove to the Highway 51 intersection (12:37). I drove along Highway 51 and then I turned on to State Route AC (12:40). I drove along State Route AC to the James M. Eddleman Veterans Affairs Welcome Center (12:42 to 1:00 p.m.). I then drove on to State Route AC and made some additional observations until leaving the Perryville area at approximately 1:06 p.m.</p> <p>Odors noted during my surveillance included cut grass, diesel engines, vegetation, and the cereal odor from Mary Lee Gilster's cereal factory. TG Missouri was not emitting a potent odor during this investigation.</p> <p>?On March 31, 2023, I telephoned Dylan Carpenter after the site visit and left a message. On April 3, 2023, I spoke with Dylan Carpenter who stated that there had not been any upset or malfunction conditions around the time period when this environmental concern was received on March 24, 2023. Dylan Carpenter also pointed out that the water wash filtration system was housed inside the buildings at TG Missouri Corporation in Perryville.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53106 <b>Concern Info</b> (Rec'd at EPA Region 7 on 3-29-2023) The company knowing releases lime dust into the air. Also it is covering peoples cars in town. Trucks continue to come out of the plant covered with lime dust. I will send photos when I obtain them.								
<b>Comments</b> At the time of this investigation, the weather was sunny and the temperature was 75 degrees Fahrenheit. The wind was from the South at 17 miles per hour with wind gusts of up to 35 miles per hour. Observations of Mississippi Lime Company were made from Lime Kiln Road, Highway 61 and Highway 32. Observations took place between 10:57 a.m. and 12:12 p.m. There was no reported weather change during this time. I did not observe dust leaving Mississippi Lime Company's property and I did not observe dusty trucks leaving Mississippi Lime Company.  I telephoned Jonathan Kennedy, Environmental and Regulatory Affairs Manager for Mississippi Lime Company, on April 7, 2023. Jonathan Kennedy stated that there had been no malfunctions, upset conditions, or emission exceedances for the last two or three months. Washracks are available for trucks when the drivers need to use them. The Standard operating procedure is for each truck to wash before leaving. Not all trucks at Mississippi Lime Company belong to Mississippi Lime Company. Outside trucks drivers that fail to wash trucks twice can be banned from returning to Mississippi Lime Company. Mississippi Lime Company uses water trucks and street sweepers throughout the day to control dust from their haul roads. Almost all of Mississippi Lime Company's haul roads are paved and the unpaved haul roads are not used much at all, according to Jonathan Kennedy..  No violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin was observed.

<p><b>Concern No.</b> 53322    <b>Concern Info</b> We here at the Dixon Police Department, have received several reports of burning hazardous materials, such as tires, trash, treated lumber etc. ,dumping trash, this is affecting the communities health.</p> <p>If you have any further questions or concerns please do not hesitate to contact us at the Dixon Police Station at 573-759-6610</p> <p><b>Comments</b> At the time of my investigation, no open burning activity was noted. The residential property appeared to be in use by metal collectors. Materials collected were being sold for recycle. There were a couple of camping type recreational vehicles parked on the property. I left a copy of the Missouri Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements, the fact sheet Management of Scrap tires, and the fact sheet Facts on Open Burning Under Missouri Regulations for Martin Wells and another copy with Cordelia Mae Seidmeier. Cordelia Mae Seidmeier stated that she does not own the property on West 8th Street, it had belonged to her son William Ford who is now deceased. The family of Cordelia Mae Seidmeier is trying to pay the property taxes on the property that formerly belonged to her son. Cordelia Mae Seidmeier? stated that she is house bound except for when someone is nice enough to take her to the doctor. Cordelia Mae Seidmeier further stated that the people staying on the West 8th Street property are not renters in that she is not being paid with money, but in services performed by the people staying on the property.</p> <p>No violation of Missouri Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements was observed.</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53107 <b>Concern Info</b> Open burning occurring at the corner of Shelby Road and Oak Grove Road in Poplar Bluff where the new restaurant is being built. This office received 6 phone calls from citizens who live in the area.								
<b>Comments</b> Anthony Strack was clearing land and open burning the debris at the corner of Shelby Road and Oak Grove Road. This property is at a very busy intersection, adjacent to the Poplar Bluff Regional Medical Center, across from the Missouri State Bank, Walmart Neighborhood Market and several homes southeast of the property. We received 6 phone calls between April 4 and 5 stating the burning was causing traffic and smoke issues.  On April 4 I observed open burning at this location with smoke covering the intersection and surrounding areas. I informed Anthony Strack of the open burning requirements. He stated he would stop burning. Upon returning to the office, I verified distances I observed with a range finder on site. Several homes were less than 200 yards from the open burning. The property was divided into two parts with different owners. The total property prior to division was approximately 100 yards across and 130 wide. Estimated width of the property with the open burning occurring was 100 yards North to South and 65 yards East to West.  On April 5, 2023 I received phone calls from citizens who live in the area informing me the person clearing the property was piling debris and burning again. I drove to the site and met with Anthony Strack of Strack Excavating again and we discussed the open burning rule. After this discussion Anthony Strack stated he would stop open burning on site.  This is the first time Anthony Strack has been informed of the current open burning regulation since the last update. An unsatisfactory findings letter with response required is being issued for these violations of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements.

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53091 <b>Concern Info</b> CP states there is excessive smoke coming from Royal Oak in Ellsinore, MO. CP states their children come in black from just playing in the yard. CP ask that someone call them in regards to this concern.								
<b>Comments</b> I arrived at the CPs property around 3:00 p.m on April 10, 2023 were I watched the property boundary shared by the CP and Royal oak for around 15 minutes. I met with Cymore Owens and she directed me to speak with Kevin Fordham. Kevin Fordham explained to me that there are days when the prevailing wind is coming from the south that dust from the facility crosses and covers their property. During the investigation Kevin Fordham showed me areas of the property where dust normally settles. These areas consist of the siding of the house, some of the children's playground equipment and the inside of a shop which is not completely sealed off from the outside. There was dust in all these areas, but no fugitive emissions were observed during this investigation. The property owners are in contact with multiple former employees of Royal Oak Charcoal, who do not believe the facility is being operated correctly. There was no concrete evidence of a violation related to fugitive emissions crossing the property boundary during this investigation, but the situation is worth monitoring. This problem became more of a problem in the summer of 2022.?								
No violations of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.330 Restriction of Emissions From Batch-Type Charcoal Kilns or 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond The Premises of Origin were observed. This situation does need to be monitored and will be investigated again when additional environmental concerns are received.

**March 16, 2023 and April 15, 2023**

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53125 <b>Concern Info</b> CP states RP has piles of brush with 4 to 8 tires on them waiting to be burned. CP states one pile already on fire and the other is waiting.								
<b>Comments</b> This investigation was conducted on April 11, 2023. Multiple brush piles and apparent scrap tires were still on site. It appeared that the location was being cleared of trees and brush. Much of what had been piled up on site appeared to be red cedar trees. Because the location is near Highway 67 and a tire shop, it appears to have been used as a dumping area for scrap tires. I forwarded a copy of the fact sheet Facts on Open Burning Under Missouri Regulations and the Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements to the property owner, Parkway Self Storage, LLC. found through the St. Francois County Assessor's Office. I searched the internet, but I did not locate a business telephone number, business owner, website, etc. for Parkway Self Storage.								
No violation of Missouri Air Conservation Regulation 10-6.045 Open Burning Requirements was observed.								
SERO	4/10/2023	4/10/2023	Clinton Howell	West Plains Howell	Permitting	JD		
<b>Concern No.</b> 53085 <b>Concern Info</b> CP states my neighbor is installing what appears to be a crematorium within 40 meters of the front door of my home. I am concerned as to the smoke and chemicals that may become released and thus contaminate the area surrounding my home. I am concerned for my property and my health.								
<b>Comments</b> Clinton Howell obtained a construction permit 122022-005 project number 2022-12-016 in December 2022 for a construction of a human crematory. The facility will also have an 8 x 8 cooler capable of holding 4 to 5 bodies.								
While talking to Clinton Howell I discussed the requirements for documentation and possible inspections at the facility. I offered compliance assistance visits or if he has a quick question he can contact any of our inspectors for help.								
No violations of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.060 Construction Permits Required occurred. No further action is planned at this time.

SERO	4/12/2023	4/12/2023	Capital Sand Proppants LLC	Jackson Cape Girardeau	Fugitive Particulate Matter	HC		

**Concern No.** 53119    **Concern Info** The concerned party states that Capital Sand Proppants is producing dust emissions from a large sand pile at its site located near Millersville. There may also be other fugitive particulate matter emissions sources on site such as haul roads.

**Comments** arrived at Capital Sand Proppants around 1:00 p.m. I drove the road that runs along the eastern property boarder of the facility for around 25 minutes making multiple trips. Dust from the facilities storage piles and machinery was being lifted into the air by the wind, but was not crossing the property boundary while I was making my observation. While I was on site there was a south wind at 6 mph. There is a public road used by the facility that runs up the north side of the facility. The facility uses a water truck when needed to control dust. After making my observations I approached the main office and met with Scott Jinks, Director of Operations for Capital Sand. I provided my credentials and explained the reason for the investigation I provided Scott Jinks "10 CSR 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin" we spoke of the regulations and how the facility can mitigate the dust and the possibility of it leaving the premises. I thanked Scott Jinks and left the facility. There were no violations noted during my investigation.  
No violations of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.170 Restriction of Particualte Matter in the Ambient Air Beyond the Premises of Origin were noted.

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53179 <b>Concern Info</b> Dust and gravel in front of CP's house with Big Trucks going back and forth to the MFA to get chemicals for the farmers fields. They used to water the road to keep the dust down, but now do not and it is awful.								
<b>Comments</b> I began my surveillance of MFA Agri Services in Bernie at 9:50 a.m. and ended at 10:50 a.m. The weather was partly cloudy with a temperature of 64 degrees Fahrenheit. The wind was from the Southwest at 8 miles per hour with gusts of up to 25 miles per hour. The relative humidity was 51%. I observed that there was some dust from the unpaved areas of MFA Agri Services because of trucks that were entering and leaving the parking lot. However, these fugitive particulate matter emissions did not appear to be leaving the property. After I made fugitive particulate matter observations from a site, I spoke with Brad Lancaster, Manager of MFA Agri Services in Bernie. Brad Lancaster stated that a 1,000 gallon water trailer is used in the fall to keep down dust emissions at MFA Agri Services. The trailer is a shop made watering trailer with a pvc pipe as applicator. I requested that Brad Lancaster begin using the trailer because, in my opinion, on windier days there was the potential for a violation at this location. Brad Lancaster did seem willing to begin applying water right away as per my request. Brad Lancaster stated that he had been dealing with the neighbor who has had past dust concerns and that the neighbor did not say anything recently. Brad Lancaster is especially concerned about dust emissions issues this summer because water application is not always as effective in the summer heat. I mentioned that magnesium chloride is a chemical dust suppressant in use on haul roads at some quarries in Southeast Missouri. Brad Lancaster stated that the chemical dust suppressant will be researched for use at MFA Agri Services for this summer. I left Brad Lancaster my business card, a copy of the regulation Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin, and a copy of the fact sheet Dust Suppression on Unpaved Roads. I thanked Brad Lancaster for the time and the assistance with my investigation.								
No violation of Missouri Air Conservation 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin was observed.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	-----------------------	------------------	------------------------------------	-------------	-----------------	-----------------------	-----	------

**Concern No.** 53320    **Concern Info** Burning tires.

**Comments** Upon receiving the concern, it was disclosed to the concerned party that Star Storage had a burning permit. Todd Raney, Air Program Supervisor, contacted the City of Leadington and spoke with Sergeant Andrew Lewis, Leadington Police, and discussed open burning requirements. Sergeant Lewis Stated that the responsible party had open burned some furniture and they had told him to stop the burning. Sergeant Lewis also stated that the City of Leadington does not issue burning permits.

On April 18, 2023, I drove by the site and did not observe any open burning. The location is fenced in but there was a phone number for the site.

On April 27, 2023, I reached out to Star Storage and spoke with Gerald Grubbs. He acknowledged that he does burn brush and had done furniture in the past, but no tires. He did acknowledge that one tv had fallen into the burn area but he knows better than to burn tvs. We discussed open burning requirements and I told him that any durable goods, including furniture and tvs are to not be burned. I also informed him that he needs to make sure he meets distance requirements if he is to burn brush. He requested a copy of the open burn fact sheet which is being provided.

It has been advised to Gerald Grubbs to discontinue any burning that goes against the Open Burning Regulation. A fact sheet is being provided to him so that he is aware of what he can and can not do.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p><b>Concern No.</b> 52960    <b>Concern Info</b> Concern Submitted through I-70/270 odor concern form:  Experienced Odor Date and Time: Mar 20, 2023 10:00 pm  Experienced Odor Duration: Currently experiencing the odor  Experienced Odor Description: Smoky or Burning, Electrical? Rubber? Idk it's bad  Experienced Odor Intensity: Strong or Offensive  Experienced Odor Address and/or Location Description: 1372 Lake Knoll Dr. Missouri 63367  Reports on Ring Neighbors all around St. Charles county  Potential Source:</p> <p><b>Comments</b> 3/22/23 - RLA - I spoke to Mady over the phone to ask her more about the odor. She said it was a burning rubber/electrical smell and it started around 6:00pm on March 20. She said that there was a haze in the air during the night and she had friends in Maryland Heights that could smell it too. I asked her if she was still experiencing the odor and she said no. She also said that she had experienced the smell on the 15th as well. I looked up the weather data and it appears the wind was blowing out of the south both those nights. I also did a search of the surrounding area and I did not find any industrial properties in the nearby vicinity. I gave Mady my contact information and told her to call me if she experiences the smell again.</p>								
SLRO	3/22/2023	3/21/2023	Unknown	St. Louis City	Odor	LZ		
<p><b>Concern No.</b> 52964    <b>Concern Info</b> The Interviewee States:  The air smells chemically in my neighborhood. This is the second time in 2 weeks and it's the same smell. It's localized in the area but it's a large area. I walked several blocks to the park and continued to smell it. It made me cough a lot. Is there a way to find out what is causing this?</p> <p><b>Comments</b> On 3/22/2023 I contacted the concerned party to obtain more information by email. The caller emailed me back with limited information indicating where the smell is coming is known to her.</p> <p>On 3/23/2023 I visited the area. I drove half a mile west on Humphry. At the intersection of Morgan and Humphry, I parked my car at IMO's Pizza there and walked around for half an hour. It is a residential area. Wind was calm and the air temperature was about 65F on a cloudy day.</p>

**Concern No.** 52966    **Concern Info** Douglas Eller emailed me the following:

"Hi, Suzanne - hope all is well with you and yours!

The scrap metal company continues to create considerable emissions/ particulate matter. The attached photo was taken around 10:30am, 3/23/23. If you look at the very center point in the pic, you'll see what looks like a white dot. That dot is actually yellow flames that my cell camera couldn't capture well.

Please tell me what action you'll take. My experience is that Wednesday and Thursday, in mid to late mornings, are the most active times for those sorts of activities.

Please tell me what action you will take - thank you! "

A picture relating to the concern was attached to the email. Will attach to the concern documents form

I responded to Douglas Eller on 03/27 "Hi Douglas,

Thank you for letting us know. Hopefully, I will be able to get out to the site on Thursday. If not, I will be able to make it out next week sometime, most likely on Wednesday.

Depending on what I see at the investigation, depends on what actions we will take regarding the facility. I will make sure to keep you updated with the investigation findings.

Thank you again! "

**Concerns Investigated Between**  
**March 16, 2023 and April 15, 2023**

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Comments	03/27 SEL, spoke with DBR, decided that an inspection along with the investigation of the facility was the best option. Started to prepare inspection and investigation on 03/27. Compiled permits, EIQs, previous inspections, and reviewed 10 CSR 10-6.220, 10 CSR 10-6.170, and 10 CSR 10-6.045							
	03/30 SEL, Around 9:00am I arrived in the area of the facility. I drove along Branch street, hall street, destrehan street, angelrodt street, and bremen ave to observe the facility. I did notice what looked like smoke emissions coming from the facility, near the south rear side. I did note that the area where the smoke emissions were coming from looked to be near where the torch cutting had been taking place in a previous inspection.							
	Around 9:20 am I drove along the McKinley Bridge, and was able to see yellow smoke emissions coming from the facility's south area, located south of McKinley Bridge.							
	Around 9:30 am I arrived at the facility and informed the general manager, Ray Dunmire, that I was there to conduct an air inspection of the facility. Mr. Dunmire informed me that the EHS Manager, Don Comer, was not currently on site and was expected to arrive at the facility within the next 10-15minutes. I asked if while we waited for Mr. Comer to arrive, if I could observe the torch cutting area, and the south area of the facility. Mr. Dunmire agreed and led me to the area. The torch cutting area is surrounded by piles of scrap metal and a crane was operating a few feet north of the area. We stood SSW of the torch cutting, around 50 ft behind the area. Upon arrival to the torch cutting area, I observed a considerable fire burning on pieces of scrap metal. I do not know how long the fire was burning prior to our arrival to the area. The fire seemed to have ignited during the torch cutting process. I began taking pictures of the fire and the area. The fire was then left unattended by the employee (documented by the video). At this time (9:40am) I began a Method 9 opacity reading. At the start of minute 2 the employee brought a bucket of water over to the fire and extinguished the fire. Following the extinguish of the fire, the employee began torch cutting again. Steam billowed out from the extinguished fire for approximately one minute (noted minute 2 on Record of Visual Determination of Opacity form). I continued my Method 9 opacity reading. In total I conducted a 15 minute (61 readings) Method 9 Opacity reading. At 9 3/4 minutes, the scrap metal caught fire again causing a dark black plume to be produced; it was recorded at 65% opacity. At 12 3/4 minutes, another small fire caught on the scrap metal causing a black plume to be produced; it was recorded at 40% opacity. Starting at when the torch cutting began, after the initial large fire was extinguished (minute 2) the first 6-minute average opacity was 16% with the highest recording being 35%. The second 6-minute average opacity was 21% with the highest recording being 65%.							
	At this time, we headed back to the main office, and met with Don Comer. After meeting with Mr. Comer, we conducted an air inspection of the entire facility. Following the inspection, I talked with Mr. Comer about my findings. I informed him, the opacity readings were in violation of 10 CSR 10-6.220. We did not discuss the open burning violation at this time. I also went over the findings of the inspection. Prior to leaving, I explained to Mr. Comer that I would contact him with the official findings of the inspection and investigations and the next steps. (see SharePoint for full report)

**Concern No.** 52965    **Concern Info** Concern came in through online form, was also forwarded to us from St. Louis City APCP:

"Date of Incident or Date First Noticed  
03/27/2023

Please describe your concern, including the location on the property.

I am a concerned home owner of saint Louis city-Soulard (S 10th Street) and am reporting an air pollution incident. As I write this it is 3:42 am, my husband and I have been woken from our sleep due to obnoxious odors.

I recognize this odor as one that is often smelled around this time each year of which I believe the source to be chemical burning in nature. This morning that odor is excessive. I am very concerned as this odor is causing difficulty to breath and a headache. Odor is similar to burning artificial nails and tires.

Please provide driving directions from the nearest town and road intersection to the location of the activity causing concern. Soulard area: Broadway/7th street/Barton"

**Comments** Responded by e-mail:

Thank you for reporting this odor, and for including me. MDNR is very aware of these odors and I'm sorry that this is such a persistent and substantial issue. Based on your location, description of the odor, and our many investigations of this odor, I also believe that the most likely source is Veolia Environmental Services, the hazardous waste incinerator in Sauget. As this facility is in Illinois, we have no jurisdiction over the matter. I have raised the issue many times with EPA Region 7 and Region 5 (which covers Illinois) as well as the Illinois EPA. I know they were planning on holding a community meeting to address the issue with concerned citizens but I have not heard any updates on that in a while. I just reached out to my EPA contact to ask for updates. I will add your name and e-mail to my list of contacts so when I hear anything significant, I will make sure to let you know.

In the meantime I would continue to report the issue to the EPA when you observe the odor. In addition to the link below, you can also contact EPA Region 5 directly at [r5hotline@epa.gov](mailto:r5hotline@epa.gov).

Comments	?On April 14, 2023 I reviewed GM past inspection reports from this office for any violations. On April 17, 2023 I visited GM area. The wind was 18 MP out of south, the air temperature was 62 degrees F. Stayed in the area for about an hour . I did not notice any odor from the GM plant. I contacted the CP by phone. He resides at 1931 Mennemeier Drive Wentzville 63385 about 3.5 miles west of GM, near highway P. He told me there is no odor today. The odor mostly comes in the evening hours( 10 PM -10:30 PM). I drove to the CP address anyway looking for other odor sources in between. The oc was noticed during the Easter weekend. I called GM Environmental Engineer (Vickie Heberlie). She told me the plant was closed during the holiday weekend, which included the paint booth water collection and recycling system.  Previous odor investigation reports I reviewed indicated that the shutting down of the paint booth water collection system allows its content to become stagnant, resulting in the conditions for excess odors to eventually be emitted after the plant was restarted.

SLRO	4/14/2023	4/12/2023	New Town Pump House	St. Charles	Odor	LZ		

**Concern No.** 53161    **Concern Info** E-mail from Peggy Riley to Dorothy Franklin:  
 "It the NT Res Fb page. Private for NT Residents. Julie Douglas lives right next to the pump house. She sent me this late this afternoon:  
 What is the latest on the stinky pump house, it's just so bad  
 I referred her to your group.  
 We had lots of extra people on New Town over Easter, so I'm not surprised at all. It's typical. I haven't noticed it down our way on N Civic Green, but it is up by New Town Lake Drive, S Civic Green Dr , and down toward the fountains on both sides of them. Julie Douglas's address is:  
 3497 New Toen Lake Dr. "

**Comments** In response to the odor complaint we (MODNR St Louis Regional Office) received on 4/12/2023, I visited the pump site/ lift station located at 2497 New Town Lake Drive in New Town on April 17, 2023. The wind was at about 18-20 MPH out of south the temperature was 62 degree F. There was no odor in the area at the time of my visit. Before my visited I tried to contact the City of St Charles on 4/14/2023 to let them know I will be in the area for an odor investigation.

At the pump station, I met an employee of Woodard and Curran Company/consulting contractor that runs the station. He was injecting Fresh Zone Concentrate , an odor neutralizing agent into the exhaust pulled out from the sewer collecting tank and released to the ambient air. He called his supervisor and the city personnel. We discussed the nature of the concern.

Present were kirstyn Lorince, Utility Engineer and Erin Ruppert(636 949 3242), Sewer Maintenance Supervisor with the City of St Charles Department of Public Works. Steve Lawrence (636 250 4600), Project Manager at Woodard and Curran Company/consulting contractor. The initial odor control system was removed 3 years ago since it was not effective. Instead, the City of St Charles has obtained funding needed to install an odor control device ( scrubber). The unit will be installed within the next 3 months' time and be ready for use at the end of the year. They identified the pollutant that causes the odor to be hydrogen sulfide (H<sub>2</sub>S). I was told that the scrubber can also control other odor causing pollutants. This is promising. We hope the scrubber will control the odor that is bothering residents in the area

Concern No.	53197	Concern Info	Online concern: The renter at 406 Thomas Ave, St, Charles Mo 63301 was just burning the backyard. I walked out a put a stop to it with a hose before he had the whole yard in flames. (Not zoysia grass) His response was "I'm going to kill it then seed it" I asked what seed he was going to use and he had no answer. Or basic knowledge of turf grass. Or any mental capacity at all. Potentially one of the dumbest individuals I've ever talked to. I think he's just a pirow and didn't want to pick up the leaves. Just figured he'd burn them. The outside of the house is unkept and trash is everywhere all the time. That's the outside, I'm sure the inside is worse. They're young losers with no pride in ownership because they don't own.. we all take pride in where we live and that's clearly not on this guys agenda. If I legitimately wouldn't have seen a pile of smoke coming from my backyard he would have let the whole yard burn with his intention on "killing it & seeding it" someone should contact the owner & let them know of this kind of behavior. I know if I rented my house out I'd like to know if my property was going to shit. I believe the owner lives in Florida, or that's what I originally believed. I could be wrong. But I haven't seen him stop by or check on the property or anything in well over a year. I just think this act of arson should be brought to the owners attention. If anything is gained out of this I just want the owner of the property to be aware of the type of trash he's has living in his house. The guy was just standing there watching the lawn burn. Clearly was getting some kind of enjoyment out of the whole experience. I'm done, just please contact the owner and bring this to his attention. If you need any more info email me.

**Comments** ?1/13/23 I tried to call the concerned party and left a voicemail. I then sent the following e-mail:

Hi Andrew,

Thank you for submitting this concern. I just left you a voicemail as well, but will reiterate the same information. Please let me know if you have any questions and I'll do my best to help.

Unfortunately, the State of Missouri allows open burning of household yard waste, as long as it is all vegetative waste that is burned on the property that it originates from. Counties and cities can have stricter regulations, but we can only enforce statewide regulations. Unless your neighbor is burning durable goods, plastic or petroleum products, vegetative waste from other properties, or construction/demolition waste, then we do not have a violation to cite here. I understand that the burning posed a serious threat of spreading to other properties – in that case, it is best to contact the local fire department.

I recommend contacting St. Charles County as well. They have a website here where you can report nuisance properties:  
<https://www.sccmo.org/1586/Code-EnforcementProperty-Maintenance-Com>

I also tried looking up the property on our state parcel viewer and through the St. Charles County Assessor's website to find an owner address or contact information. All I can find is that the property has been owned by Karen and Brian Eufinger, and the mailing address is the same as the physical address. If it was sold recently, maybe St. Charles County hasn't updated their information yet.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 53359 <b>Concern Info</b> The concerned party (cp) states that her neighbor is burning trash, tires and aerosol cans nightly. The fire department has responded before but they told her that she needs to call the Department.								
<b>Comments</b> MSC 4/18/23: I attempted to call Kristy Peebles, I left a voicemail with my name and contact information. The concern form does not have an address for the source of concern (SoC), what day the fire department (FD) was at the SoC, or any contact information for the FD or SoC. If I do not hear from Kristy I will assume it was Festus FD and see if I have enough information to go off of to find an incident report.								
MSC 4/19/23: Called Festus Fire Department. Was told that Chief Jeff Broombaugh was out but would return tomorrow.								
MSC 4/20/23: Was able to speak to Chief Broombaugh. I first asked what the address of the source of concern was he stated 521 South 5th street in Festus. I inquired about any incident reports containing information about what was burned and he gave me the following information: Stated that they had been out to the source of concern multiple times. He stated that in the start, there were some questionable items being burned like wires and concrete forms but on all recent calls, it has been untreated wood and brush being burned in a pit. He stated they never saw evidence of aerosol cans. I gave him some information about how we generally handle situation like this on our end and our department can use that anything found in a burn pile in an incident report.								
After talking to Festus FD I once again attempted to call Kristy Peebles at the provided number. I was sent to voicemail and left a message describing findings, next steps, and gave contact information in case she cared to discuss.

**Comments** ?Replied 4/18/23: "Hi Annamarie,

Thank you for submitting this concern. I'm sorry to hear that you are dealing with this strong odor. I'd like to get a little more information from you so that we can investigate it and hopefully figure out where it is coming from.

Are you still experiencing this odor?

When did you first experience the odor? Is there a time of day, or day of the week when the odor is the strongest?

Do you have any theory as to where it could be coming from? I looked up your address and I'm not seeing any likely sources in the immediate area, such as industrial parks. If you happen to know what direction the wind was blowing when you noticed the odor, that would be very helpful as well."

CP responded: "Hi David,

Thank you for responding so quickly. The smell stayed for about 4 days. Spire gas said they detected no natural gas, propane, or methane. The smell came in like bursts not constant.

So the wind and the smell was coming from the direction of my neighbors house 2090 country club rd. That neighbor does a airplane parts business out of her home. She claims to not have been

doing anything that would cause such smell. However when she came to my house the day Spire was over she was dressed in a PPE zip up suit and blue rubber gloves and smelled just like what I was experiencing.

I don't know what chemicals she works with or if she has to follow any environmental regulations. The smell is not occurring at this time."

Comments	<p>SharePoint #4322</p> <p>On March 13, 2023 the Department received environmental concern #4322 in regard to the open burning of an older residential structure, which initiated an investigation on March 17, 2023. According to the concern report, the fire was observed on March 9, 2023 at a property located near the intersection of Farmers Branch and Southern View Road and alleged to be owned by Capital Quarries Company. Included in this concern are photographs submitted by the concerned party of the demolished home demolition waste on fire. Using aerial imagery from Google Earth, it was determined a single family residential structure existed on the property. According to the property card, provided by CCD, the single story home was built in 1914, and had two bedrooms for a base area of 1076 sqft.</p> <p>On March 17, 2023, Russel Reel, Environmental Scientist, and I (Treavor Bussard, Environmental Analyst) arrived on site to Capital Materials located at 1506 Farmer Branch Road, Ozark. I came in contact with a site operator and requested to speak with the Quarry Supervisor. Soon after I was met by Gene Haddock, Quarry Supervisor. I introduced myself, provided credentials, and explained that the Department was conducting an environmental compliance investigation. I asked Haddock if the quarry had performed any recent expanding or demolition work. Haddock mentioned the property of concern, stating that a home was torn down. I then asked Haddock what happened to the demolition waste. Haddock stated that any recyclable metals (mostly the roof) was collected and the remainder of the material was burned by the construction crew. I then asked Haddock if we could view the property, Haddock granted Reel and I permission to enter the property.</p> <p>The three of us then met at the property of concern located at 299 Southern View Road. We initially observed two back hoes and a large lot recently cleared. We observed two barns remained on the property and no evidence of demolition waste was left behind. I asked Haddock if any of the material, after it was burned, had been taken to a landfill. Haddock was unsure and referred any further questions to EHS, Chris Thiltgen. I explained to Haddock that since this material is considered demolition waste, it must be properly disposed, and that burning of this material is in violation of 10 CSR 10-6.045 Open Burning Requirements. Haddock confirmed the structure was intentionally burned and according to CCD Property information, had a base area of 1076 sqft. (40 cubic yards equals approximately 105 sqft). I explained that the open burning of greater than 40 cubic yards of demolition waste is a serious and significant, Group 1 Violation, which will result in the issuance of a Referral Notice of Violation. I then presented and explained the Departments Acknowledgment of Receipt which Haddock signed on site. Finally, I left Haddock with a fact sheet and regulations on open burning and ended this portion of the investigation.</p> <p>Shortly after, I received a phone call from Ericka Baxter, Capital Materials Area Operations Manager. Baxter informed me that she is aware of the situation and is prepared to cooperate fully so that compliance can be achieved. I informed her that the open burning of greater than 40 cubic yards of demolition waste is a serious and significant, Group 1 Violation, which would result in the issuance of a Referral Notice of Violation. Baxter requested to be the point-of-contact as she would be seeing this matter through. I then thanked Baxter for her phone call and taking quick action to this matter, ending our conversation.</p>

<b>Comments</b> SharePoint #4335 I arrived at the location of 9199 East Farm Road 116, Stafford, Missouri. Upon arrival, I observed a burn pit in the backyard with a fire in it. I knocked on the front door of the house and met with the property owner, Vitalie Cretu. I advised Cretu of the reason for my visit and explained the Open Burning Regulations as they would pertain to his situation and the concern details. Cretu invited me to the backyard where I observed a large piece of carpet that contained pieces of drywall and other remnants of household remodeling waste. Cretu stated he was waiting on a dumpster for proper disposal of the mentioned waste. I then walked over to the burn pit and noticed some lumber burning in the pit. I advised Cretu that he was not allowed to burn anything except untreated wood waste and brush. He understood. I left a business card and educational packet with him. I told him if he had any questions then to please call me.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52812	Concern Info	BNSF reporting two explosions at Springfield Iron and Metal during the early hours of March 15, 2023; occurring at approximatley 3:00 and 6:45 a.m. BNSF states that employees reported to the train master, that the first explosion was strong enough to shake "Building 12" and rattled lockers located in "Building 12A"					
Comments	SharePoint #4380 ?The Department received environmental concern #4380 on March 15, 2023 in regard to two explosions occurring during the early hours that day, at Springfield Iron and Metal. On March 16, 2023, I (Treavor Bussard) arrived on site to the area of concern at 10:00 a.m. To begin, I found myself on the northeast side of Springfield Iron and Metal (SIM) property, off W. Pacific Street; where I performed a cursory review of the area. At this time, I did not observe any torch cutting or the shredder in operation. It is important to note, as mentioned in other reports, that the shredder is only in operation overnight.Before making contact with SIM, I observed BNSF employees on the service road between SIM and the railway, I then came in contact with David Nickels, Superintendent of Operations. I introduced myself and explained that I was investigating the explosions at SIM. At this time I noticed other BNSF employees circling objects with white spray paint. Nickels informed me that employees are now going to being circling materials landing on their property from SIM in efforts to track when and how much material is being deposited. I then made my way to SIM and requested to speak with David Braun, however he was not on site at the time. I instead met with Burrell Williams. I explained the reason for visiting and inquired about the explosions. Williams confirmed they did have two explosions, one from an early model "square body" Chevy truck, and another from a crumpled/crushed aluminum boat. Williams stated that after the truck explosion the facility ceased running cars from that shipment and fined the source facility \$150. Williams added they will inspect the set aside vehicles again prior to being shredded. For the second explosion the facility received two crushed aluminum boats, which resembled a rectangle. The shredder operator inspected these boats and assumed them to be free of gas tanks. However, shortly after shredding one of the boats exploded. Williams and I then made our way to the shredder where I observed the held vehicles and second aluminum boat. I asked Williams to explain the inspection process. Essentially, the facility receives cars one of two ways; the first being everyday citizens selling their vehicles, and the second being other facilities sending vehicles to be recycled. The latter usually comes pre-crushed/flattened on truck beds prior to arrival at SIM. Regardless of the source of the vehicle, they are all inspected for gas tanks and batteries prior to being shredded. For civilian vehicles, the gas tank is drained, removed, and the trunk checked. For vehicles that arrived pre-crushed/flattened, they are unloaded, inspected, then flipped over to be inspected for the presence of gas tanks. Trunks are checked if accessible. I asked Williams what happens when the operator cannot confirm whether or not a gas tank is present. Williams answered that the operator will cut vehicles into multiple pieces using large shears and then each piece is inspected again prior to shredding. I thanked Williams for the information and suggested the facility enhance inspection procedures because while the explosions may not be regulated by the Department, the occurrences still imposes an immediate threat to not only SIM and BNSF employees, but potentially neighboring civilians. Williams agreed and stated the facility will reevaluate and enhance vehicle inspection to eliminate all explosions. I then ended my investigation with no additional violations.

SWRO	3/29/2023	3/16/2023	Seth Housely	Aurora Lawrence	Open Burning Odor Animal Waste	CG		

**Concern No.** 52814 **Concern Info** CP says that a residential property within Aurora has a horse and multiple ducks as well as other animals. The CP is primarily concerned with the odor from the property due to the animals/animal waste which impacts multiple neighboring properties. CP also mentioned that they have a pit that they use to burn various materials and they frequently burn for multiple days at a time including burning overnight. They said that they think there are only tree limbs there right now but they have seen the property owners burning mattresses, furniture, and material leftover from stripping wires. CP also expressed concern with the runoff from the property causing pollution and stated that they've observed stormwater impacted by animal waste running off onto neighboring properties. I explained that we may not have regulatory authority to do much about the odor since it may be considered to be from an agricultural source, or the runoff unless it is visibly and directly causing a water quality issue, but that we may be able to investigate the burning. I explained that they should contact the city to see if there are any local ordinances/nuisance codes regulating these items in the city of Aurora.

**Comments** SharePoint #4389  
?No violation. This property is literally in the middle of town in a residential area. There was some odor, but it was not very strong, and is not a regulated activity because it is a backyard bird raiser. There was no run off at the time of the investigation. No one answered the door, so I went to Aurora City Hall. They are aware of the situation and are currently addressing it through city ordinances.

<b>Concern No.</b> 52837 <b>Concern Info</b> Concern was reported to the EER Incident line on March 19th. Caller reports that an individual is bringing in trade waste, vegetative debris, and tires from off-site and burning it. The burning location is in a valley behind several homes in a subdivision. See attached email with summary info.								
<b>Comments</b> SharePoint #4418 ?I could not access the ravine as no one was on site to request permission. I will send a letter to the property owner and include the open burning regulations.

### Concerns Investigated Between March 16, 2023 and April 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Concern No.</b> 52833 <b>Concern Info</b> Caller states that someone has an amazon resale business and is bringing leftover pallets and waste onto their property and burning it. Caller states that the waste has a chemical smell and is concerned that the pallets may be treated wood.								
<b>Comments</b> SharePoint #4427 ?I arrived on site and noted a burn pile of approximatley 10x10 that consisted of untreated pallets and cardboard. There was one rope basket and one other solid waste item present on the edge of the pile. Kaylene Cone stated that they normally sell the pallets and recycle the cardboard. They have a large roll off dumpster and one small dumpster from A-1 Hauling.We discussed the open burning regulations and Cone stated that they would not burn anything in the future. An educational packet was left on-site with her.								
SWRO	3/28/2023	3/20/2023	Pablo Tapia	Taney	Open Burning	TW		
<b>Concern No.</b> 52838 <b>Concern Info</b> Caller states that Pablo Tapia, owner of RDU Excavating, has been hauling in trade waste and burning it. Caller states this has been going on for a couple of years and they have contacted us in the past about it.								
<b>Comments</b> SharePoint #4425 I could not access the ravine because no one was available at the time of the investigation. No evidence of open burning was observed during the investigation.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p><b>Concern No.</b> 52854    <b>Concern Info</b> Adam Pennington called regarding his neighbors, Harvey and Cindy Horton. He is a mechanic and burns their household trash weekly and he adds a few tires to the burn pile each week. He also takes apart RV's, basically cuts them in half and burns the top portion. His daughter lives in a 5th wheel camper on the property and Mr. Horton took a white pvc pipe and attached to the camper and that goes on the ground for their waste. He stated it smells bad as it is not contained in a sewer system, just running on the ground.</p> <p><b>Comments</b> SharePoint #4437</p>								
SWRO	3/29/2023	3/24/2023	St. Peters Church	Billings Christian	Asbestos	TB		
<p><b>Concern No.</b> 52907    <b>Concern Info</b> The SWRO received an email from DNR employee, Christopher Dudenhoeffer, who received an environmental concern from Billings Code Enforcement Officer, Terry Danley, who indicated that asbestos siding is being improperly removed from a church. (Broken into pieces, material not wet during removal) Danley indicated the general contractor to be David Rauch.</p> <p><b>Comments</b> SharePoint #4508-On March 29, 2023, I arrived on site to the area of concern located at 303 Northeast Pine Street, Billings at approximately 9:00a.m. Before making contact I performed a curser review of the area and did not observe any work activity nor any visible emission. I then came in contact with St. Peters Church representatives David Hampton and David Rauch and Jeff Maez with One Touch Solutions. After introductions, I asked if an asbestos inspection was completed. Rauch was able to provide lab results where all three samples of cement siding tested positive at 17, 18, and 20%. Rauch added that only the siding is being removed at this time. The remainder of the Cat II material was non-friable and in good shape. Maez explained that the siding was being removed while wet, kept in mostly intact pieces, are carefully lowered to the ground, and are then placed into bags, loaded onto a trailer, and lastly covered in a final plastic barrier for transportation. I explained to the group that since this material is not considered regulated asbestos containing material (RACM) that no abatement notification is required unless the material was improperly handled and converted to RACM.Maez added that the material will be disposed of at the landfill near Lamar and would retain any disposal receipt and submit them to my attention once received. Maez then showed me where their waste disposal area and I was able to determine that the siding was kept mostly intact and is adequately wet. I reminded the group to continue to handle the material properly and if any visible emissions such as dust are observed then work practices must be revised so that no emissions are generated. I then left the group with fact sheets on asbestos and ended my investigation with no violations. ?</p>

SWRO	4/20/2023	4/10/2023	Springfield Iron and Metal	Springfield Greene	Open Burning	TB		

**Concern No.** 53209 **Concern Info** BNSF is again raising concerns over explosions and possible open burning at Springfield Iron and Metal.

**Comments** SharePoint #4800. On April 10, 2023 the Department received environmental concern #4800 in regard to explosions and possible open burning originating from Springfield Iron and Metal (SIM) which initiated a special night investigation on April 20, 2023. The only process on site that could contribute to explosions is the shredder, therefore I focused my attention on the shredder, which is exclusively operated at night. I (Treavor Bussard) arrived on site to Burlington Northern (BNSF) property at 9:30p.m. Weather conditions at this time were clear skies, with winds from the north at 12 MPH, a temperature of 57 degrees and a relative humidity of 67%. From this position I was able to get a clear view of the top portion of the shredder which at the time was not in operation. I then made observations along the property boundary between BNSF and SIM noting no noticeable differences in the condition compared to previous investigations.

Since it had been an hour and a half since the beginning of the investigation and no activity from the shredder had been observed, I then found my way to the North Kansas Expressway Bridge that overlooks SIM to the east. From this position I was able to view the majority of the property, including the shredder. I observed minimal activity on the property, (only lighting, no work activity). I then returned to my original vantage point on the BNSF service road. Over the next hour I did not observe any activity from the shredding process nor any indication of open burning on the property. I then ended my investigation at 1:00am April 21, 2023. A follow up investigation during the night may be warranted pending the submittal of additional concerns. ?

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	53100	Concern Info	Caller is very upset and feels she has been dealing with this issue for over two years and the only time anything gets done is when she contacts JC. She said the last time she did that SWRO issued a violation and likely would not have done so had she not spoken to DEQ Deputy Director Art Goodin (she could not recall his name however I found it in an old concern). Mailes Tree Service burned at approximately 8 pm last night and ash was all over their vehicles this morning. The pile was too close to their home. She said she doesn't have issues when the burn in the back corner where they are supposed to burn and she only wants them to follow the regulations. She is filing a lawsuit against Mailes civilly but wants the Department to enforce the regulations on them. She stated that she does not feel we are doing enough and is frustrated. She stated she has cameras which documents the amount of materials coming into the property and that Mailes is hauling in over 80 cubic yards. She said this was a courtesy call before she again contacted JC to get something done. I told her if we find violations, we will issue violations. We spoke for twenty minutes. She would like for someone to conact her after the investigation. I told her, we would do that even if I have to call her myself.					
Comments	SharePoint #4674  Burning was occurring within 200 yards from the nearest occupied structure. Unsatisfactory finding 4/26/23 Signed Acknowledgement Statement 4/12/13							
SWRO		4/14/2023	C&L Grease and Wastewater Services	Carterville Jasper	Odor	CG		
Concern No.	53135	Concern Info	Caller is half mile from buisness, can smell it at home and driving down the freeway (caller estimates about a mile away from the buisness is when you start smelling it), most prevalent when wind is coming from the North. Can be smelt without wind, but not as pungent. Sticks to house and can be smelt every day, but not always all day long. Smells like used cooking oil.
